

Safe Harbour 2.0

Helping your safe 'return to the office' strategy

Overview

The 'Safe Harbour' solution, designed and developed by the Natilik team, helps to address business challenges when faced with returning their workforce to an office environment in the 'Next Normal' landscape.

By combining intelligent and automated processes through integrations powered by Cisco and AppSpace technologies, the solution endeavours to minimise the close contact required when using and sharing an office space.

Initially addressing the need for safe access and usage of the office, 'Safe Harbour' looks to deliver a zero-touch experience considering critical health and safety precautions and recommendations, reassuring everyone the space is being used correctly and safely. Combined with a bot driven booking system and friendly UI, Safe Harbour is designed with the user experience at the heart.

Three ways Safe Harbour solves your business challenges

1

Safe return for employees

Safe Harbour creates a single holistic interface that enables staff to book and access the office space safely. It enables HR and operations teams to have visibility of visitors, guests and employees and information on their time in the office, adherence to health and safety guidelines, details for track and trace protocol and to observe trends in office usage to inform and better adapt their environment in an agile way.

2

Real time safe routes

Usage and movement around sites and offices will require adaption to stay within legal space capacity usage. Safe Harbour consolidates leading technology, through integrations, to notify and inform on the correct spaces and usage for teams in real time. This can be updated and adapted when needed to best suit the business requirements in line with government recommendations.

3

Real time safe routes

When considering the health and safety of the workforce many businesses are employing a zero-touch policy and are working to minimise the interaction with people. Safe Harbour uses zero-touch technology such as QR codes to remove the need for human interaction for tasks such as visitor registration with customisable check-in rules, health disclaimer forms and meeting room location information.

Features

Simple Booking

System Use automated bots to create a simple and user friendly booking system that seamlessly integrates with your collaboration tools.

Simple Kiosks

Turn any screen into a zero touch Kiosk for your visitors and teams with QR code check-in and intuitive Kiosk software.

Compliance Reporting

Be able to export reports of visitors and users for track and trace compliance and to identify trends of how the space is being used.

Health Disclaimer

Keep your teams safe by sending out health disclaimer forms to get them to check for possible symptoms before their visit.

Zero Touch Guidance

Direct users to designated booked work stations direct to their mobile device with clear indications of one way systems in place.

Digital Signage

Connect agile signage within your workspace to push alerts, warnings and recommendations to a location with new rules in mind.

The holistic approach

Powered by APIs

Natilik believe that together we can achieve more, that's why we have leveraged over a dozen APIs using the best in class solutions including; Meraki, Cisco ISE, Cisco CMX, Webex, Appspace, Cisco XAPI, Microsoft Graph, Kubernetes, Mazemap.

Bringing tech together

Safe Harbour spans multi-domain technology, bringing together the power of your network, infrastructure security, physical security, collaboration tools, business applications and company culture, to provide an end to end solution that can be easily adopted by your teams.

Proven success

Faced with the same challenges as you, Natilik have implemented the Safe Harbour solution within their London office from day one, bringing to life the development to support their teams. Experience it for yourself on your next visit to the office.

Backed by the best

Natilik have a trusted network of ecosystem partners that are industry leading in bringing the best solutions to market. Within Safe Harbour we connect applications and systems to meet your business challenges with seamless integrations developed by our Natilik team.
