

NATILIK

Embrace smart and sustainable hybrid workspaces with **Cisco Spaces**

Are your physical office spaces leaving you with data blind spots in the behaviour of your people, and the things (sensors, smart devices and other assets) that power those locations? Every laptop, phone, camera and IoT device that connects to your network stores data and insights that can help you achieve better outcomes. But how can you harness and visualise those insights to make your environment safer, your building smarter and your sustainability goals more achievable?

That's where Cisco Spaces comes in. This powerful platform leverages your existing Cisco network infrastructure and collaboration devices to visualise the way your physical office space is being utilised, and the environmental data that allows you to better monitor your energy efficiency.

Employee experiences and productivity

Cisco Spaces transforms your static floor maps into interactive, dynamic 3D models to create safer, smarter workplaces. From wayfinding to real-time information about indoor environmental conditions, such as air quality and temperature, and the occupancy of work and collaboration spaces.

Now you can equip your people with the information they need to make informed decisions about where they work and how they collaborate when in the office. As well as ensuring your IT, facilities, and HR teams can action real time analytics to better utilise space, manage energy usage, and quickly act on any health and safety concerns.

Safety and compliance

Continue to ensure all visits to your office or locations are safe with built-in apps for monitoring location density of people, investigating the impact of self-reported incidents, and delivering contactless experiences wherever possible. Gain real-time visibility into the number of people at your location and use that data to drive important safety measures, such as adjusting maximum space capacity or taking steps to improve air quality.

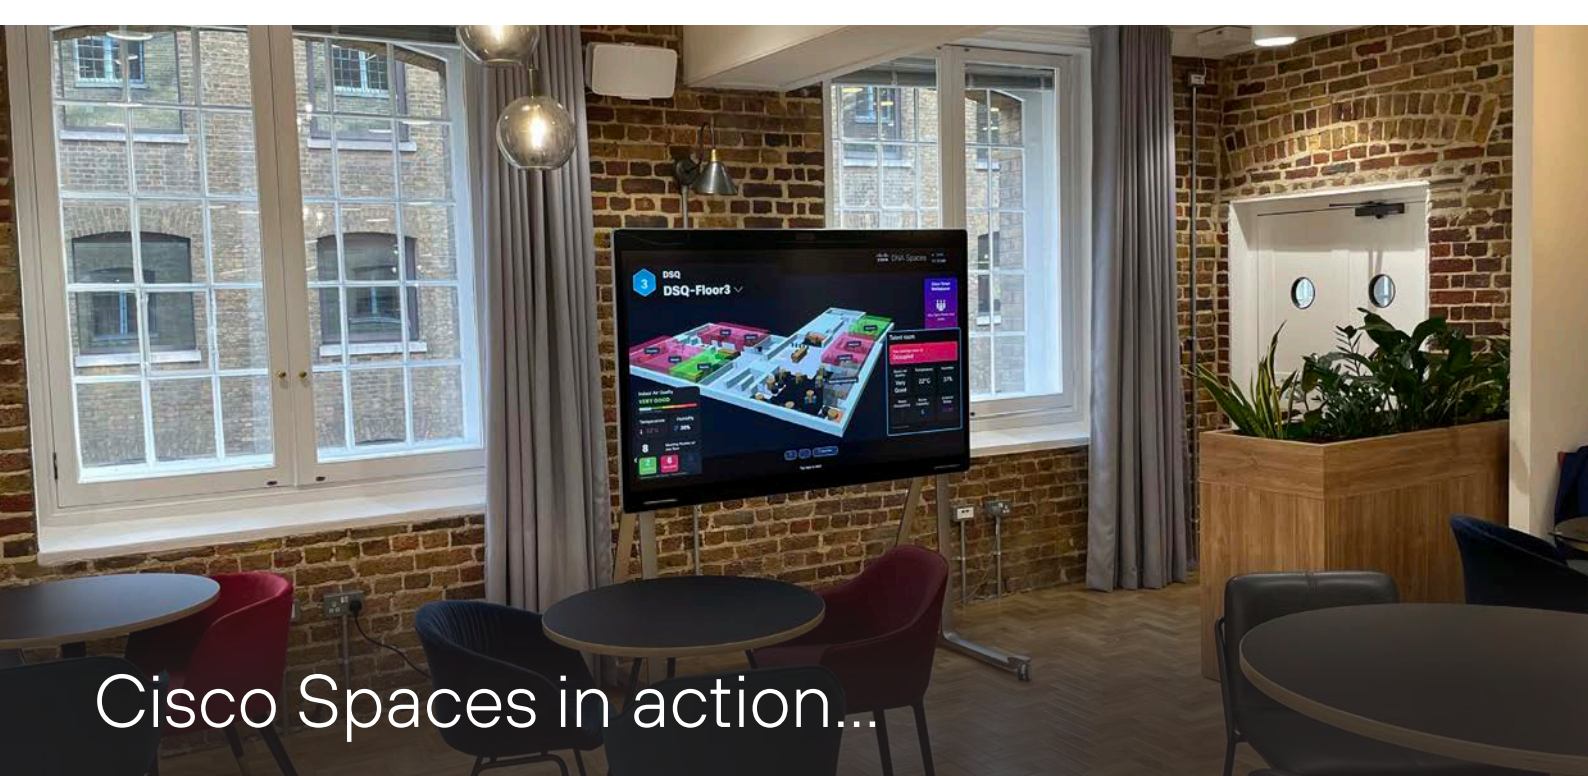

Space utilisation

Drive key business decisions by leveraging insights into how your spaces are being utilised, the location of your devices, as well as people's behaviours. Whether that's understanding how events and layout changes impact visitor behaviour or understanding whether your meeting spaces are being used above or below their expected capacity.

Energy consumption

Buildings contribute to 33% of greenhouse emissions and 40% of global energy consumption. With Cisco Spaces, your Cisco collaboration and network devices can act as sensors for occupancy, air quality, temperature, humidity and more. Helping you identify and optimise energy inefficiencies and make informed decisions to reduce your real estate carbon footprint too.

Natilik was the first Cisco partner in the UK to implement Cisco Spaces in their own workplace.

By doing so, the Natilik team have been able to:

Save Energy

Save energy by setting heating, ventilation, air-conditioning and lighting levels to work based on occupancy, rather than pre-existing scheduled operations.

Monitor space occupancy

Proactively monitor and manage space occupancy in their London HQ, adapting rooms and spaces to meet the requirements of their people, rather than assuming how they will be utilised.

Refocus utilities

Dynamically target cleaning activities around actual usage.

Leverage insights

Detect and track device consumption and location data.

Why Natilik?

Natilik has been helping clients with the design, delivery, and management of collaboration applications, devices and insight tools for over 20 years. Serving as a trusted partner to some of the world's leading organisations across a wide range of industries with a client-first consultative approach and methodology, you can be assured of a solution that is right for you.

Take advantage of a team of highly skilled and experienced industry certified experts that will act as an extension of your business, with the Natilik team working with your internal teams to truly understands your desired outcomes. Utilising a tried and tested services methodology that differentiates every solution built, Natilik is completely focussed on ensuring that you get a truly exceptional experience every single time.

If you'd like to know more, contact us today and one of our collaboration experts will be in touch.
