

# Transforming the digital infrastructure of a leading European logistics company

## The Client

**Headquartered in the UK, the client is a leading European logistics company that employs over 1000 people across 19 sites.**

## The Challenge

Due to their exponential growth, and in order to cater for the increased requirements and meet the needs of their customers, the client was building the 2nd largest warehouse in Europe.

The team wanted to be the best in class logistics and automated picking warehouse and faced the challenge of transforming their digital infrastructure in order to support the new applications and tools that were needed to improve their warehousing, picking and user mobility.

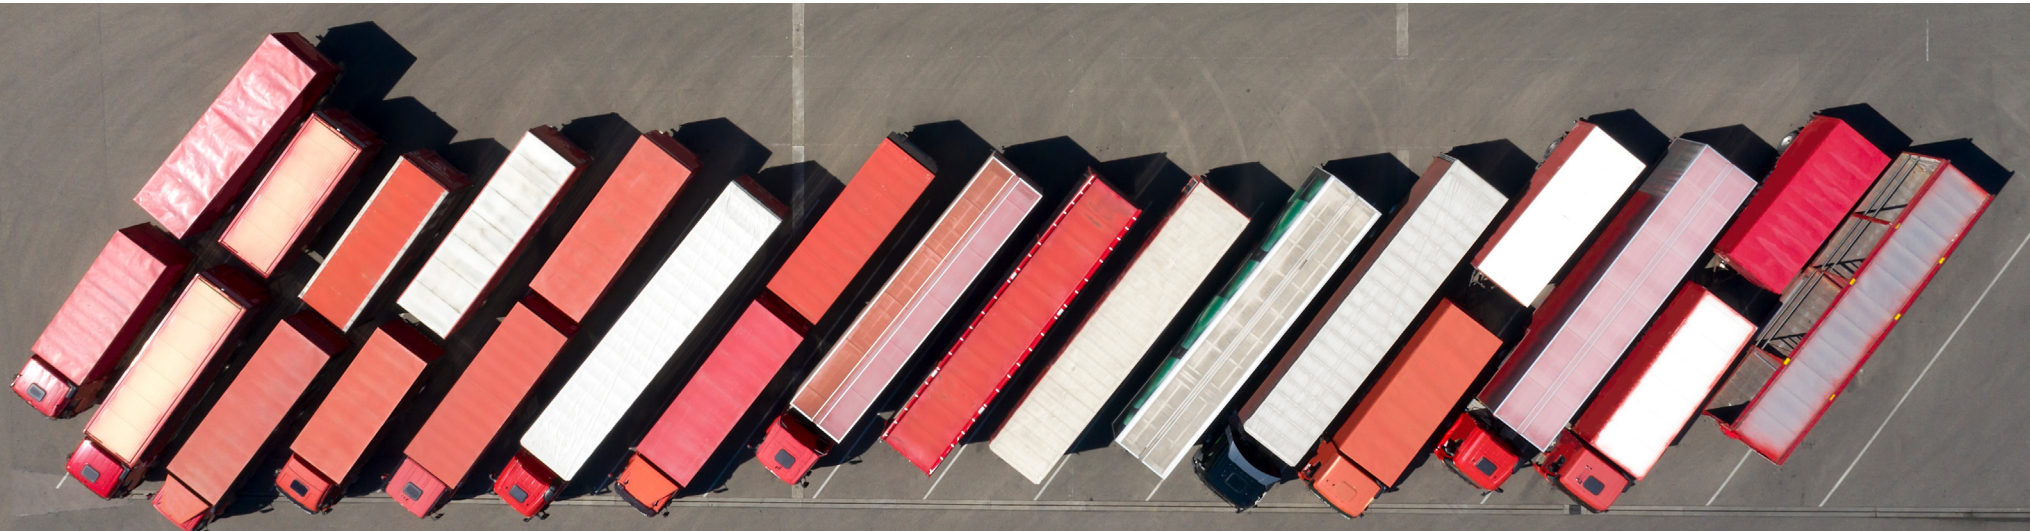

The client's team needed the solution to be simple to manage, monitor and secure to reduce the stress on their busy IT team.

## The Solution

Natilik designed and implemented a bespoke solution in just three months, helping the client meet their tight timeframes.

The software defined solution consisted of Cisco technology, including, Cisco 9k LAN, over 200 Cisco Aironet wireless access points and SD-WAN with Cisco Hyperflex at the core. Cisco's Application Centric Infrastructure (ACI) was also deployed.

To ensure the network was completely secure the solution was underpinned by world leading cloud and endpoint security. Cisco Stealthwatch was used for advanced threat detection, Anyconnect for secure VPN, Identity Services Engine (ISE) for secure access control as well as Cisco Duo and Umbrella.

## The Outcome

The client can now deploy services, changes and remediation across the entire network in minutes, saving the IT team time.

They have 360-degree visibility and analytics over the whole network, helping the team easily monitor the entire solution, ensuring the technology always runs efficiently.

With over 1000 IoT devices supported and secured, it enables an enhanced level of employee mobility and provides the realisation of the next generation environment that the client was looking for.
