

Cisco Catalyst Centre Assessment Service

Cisco Catalyst Centre (formerly known as DNA Centre) offers powerful capabilities, including automation, reduced deployment and provisioning times, and unprecedented performance insights. However, many organisations have faced challenges in maximising the value of their investment.

If your organisation is struggling to fully harness the extensive functionality that Catalyst Centre provides, our tailored assessment service is here to help.

The aim of the service is to provide a full assessment of your current environment to ensure that Catalyst Centre is delivering your desired outcome to ultimately ensure your network is optimised for performance and reliability.

The key benefits and outcomes of Natilik's Cisco Catalyst Centre Assessment Service...

Validation and Documentation

Natilik will validate and document the condition of the existing Cisco Catalyst Centre deployment and the platform health, including devices such as Wireless LAN controllers, switches and access points. This ensures that the deployment is running the appropriate software versions and is in optimal condition.

Wireless Assurance and Application Telemetry

We'll look at your Catalyst Centre Wireless Assurance and Application Telemetry, ensuring that the wireless network is performing optimally and providing valuable insights into network performance.

Health Reporting and Recommendations

Natilik will complete a Catalyst Centre network assurance review to confirm the health of all network devices. A health check report will be provided detailing recommendations and clear steps to bring your Catalyst Centre managed network back into compliance and full health.

Remediation Support

We recognise that additional support may be needed to implement the recommendations. At this stage, we would conduct a workshop to address and action the critical fixes and enhancements.

During the supplementary workshop, Natilik will focus on resolving any critical issues within Catalyst Centre, ensuring that no P1 or P2 alerts are present. If such alerts are identified as part of this follow up engagement, Natilik will take swift and appropriate steps to remediate them, ensuring your environment operates smoothly and efficiently.

Why Natilik?

Cisco Expertise

Natilik holds Gold partner status and has been a Cisco partner since 2010, winning multiple awards over the last decade as a result of our innovation and technical capabilities.

Catalyst Centre Skills

Not only are we Cisco experts, we are also trusted Catalyst Centre experts, deploying and managing client Catalyst Centre networks using best practises developed since it was brought to market by Cisco in 2017.

End-to-End Managed Services

If you need further support or flexibility, the Natilik Managed Network team is on hand to offer the right level of service for you, including options for fully hosted and managed Catalyst Centre as a Service.

Global Coverage

With centres of excellence strategically located in London, New York and Sydney, it means that no matter where your operations are across the globe, our team is there the support you 365/24/7.
