

CORTEX XDR FROM paloalto[®] NETWORKS

ARE YOUR SECURITY PRODUCTS CONNECTED TO KEEP YOU PROTECTED?

Siloed security tools burden teams with complexity, spiralling costs and poor security outcomes. What's needed is a single security platform with full visibility that can detect and eradicate threats in their environment by integrating and analysing all security data sources. Cortex XDR helps you achieve this.

YOUR CHALLENGES

1 SILOED SECURITY DATA LEAVING BLIND SPOTS

2 TOO MANY PLATFORMS TO MANAGE

3 LACK OF INTEGRATION PREVENTING AUTOMATION

CORTEX XDR SOLUTION

KEY FEATURES

Cortex XDR provides customers with a holistic platform, including native integration of data spanning all key security sources.

Centralizes and automates key functions and processes across the entire infrastructure, including incident management, root cause analysis, and comprehensive response actions.

Consolidates security tools by using existing NGFWs as sensors, thus avoiding the need for extra appliances.

Via Cortex XDR a customer can partner with industry-leading Managed Detection and Response providers for day-to-day, 24/7 support.

ML-powered detection and response ensures customers can pro-actively detect attack behaviours and stop all threats.

EASE YOUR DEPLOYMENT WITH CLOUD DELIVERY

The cloud native Cortex XDR platform offers streamlined deployment, eliminating the need to deploy new on-premises network sensors or log collectors.

You can use your Palo Alto Networks products or third party firewalls to collect data, reducing the number of products you need to manage.

You only need one source of data, such as Next-Generation Firewalls or Cortex XDR agents, to detect and stop threats, but additional sources can eliminate blind spots.

Easily store data in Cortex Data Lake, a scalable and efficient cloud-based data repository.

THE 6 MUST HAVES FOR DETECTION AND RESPONSE

ANALYTICS AND MACHINE LEARNING

You need a comprehensive set of machine learning and analytics techniques to stay ahead of rapidly evolving threats. Cortex XDR provides AI-driven local analysis to block malware, behavioural analytics to detect intrusions and active attacks and global analytics to improve detection accuracy and coverage.

RAPID PACE OF INNOVATION

To outpace fast-moving adversaries, Natilik partner with vendors that continuously strengthen or expand their products' capabilities. Palo Alto Networks is committed to delivering the world's best detection and response platform both today and in the future, with investment in product development and innovation.

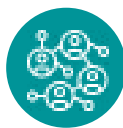

RETURN ON INVESTMENT

Cortex XDR increases your ROI by leveraging your existing security tools as sensors, eliminating on-premises log servers with cloud deployments, simplifying operations with data stitching, alert grouping and root cause analysis. On average XDR lowers total cost of ownership 44%, compared to traditional siloed tools.

EXTENDED VISIBILITY ACROSS DATA SOURCES

Cortex XDR is the industry's first extended detection and response platform that natively integrates endpoint, network and cloud data to stop sophisticated attacks.

AUTONOMOUS SECURITY OPERATIONS

Manual processes slow down incident response. Cortex XDR integrates with Cortex™ XSOAR for orchestration and automation, allowing you to streamline investigations with playbook-driven analysis, and automate responses.

SIMPLIFIED INVESTIGATIONS

Cortex XDR simplifies investigations by automatically revealing the root cause, sequence of events, and threat intelligence details of alerts from any source.
